SUMMARY

Cybersecurity graduate (B.Tech CSE, 2026) seeking SOC L1 or IAM Analyst roles. Set up Sumo Logic SIEM log collection from a Windows Server on AWS EC2 and wrote a brute-force detection rule for Windows Event ID 4625. Built an Okta and AD IAM lab with MFA and mapped APT techniques to MITRE ATT&CK. AWS Certified Cloud Practitioner. Immediate joiner.

EDUCATION

B.Tech, Computer Science and Engineering (Cybersecurity) | SRM University AP | CGPA 7.13/10 2022 – 2026

EXPERIENCE

Cybersecurity Intern | Edunet Foundation Jun 2024 – Aug 2024

- Built a Python keystroke-logging tool (Tkinter UI, pynput key capture) in an authorised lab to study how keyloggers capture input.
- Saved captured keystrokes in text and JSON formats, and documented how such malware behaves and how endpoint monitoring can detect it.

PROJECTS

SIEM Deployment and Brute-Force Detection | Sumo Logic, AWS EC2, Windows Server

- Deployed a Sumo Logic collector on a Windows Server VM in AWS EC2 and ingested the Security, Application and System event logs; confirmed 149 events were searchable.
- Wrote a brute-force rule on failed logons (Event ID 4625); tested with 10 failed RDP logins, all 10 detected.
- Correlated Event IDs 4624 (logon), 4634 (logoff) and 4672 (special privileges) to rebuild the full logon session for triage.

IAM Lab: Okta and Active Directory with MFA | Okta, AD DS, Windows Server

- Installed AD DS, promoted Windows Server to domain controller (lab.local), synced users to Okta via Okta AD Agent.
- Configured user and group lifecycle, group-based app assignment, forced password reset at first login and an MFA policy; tested sign-in end to end.
- Troubleshot and fixed three setup failures, including a service account conflict and an expired agent activation code.

Threat Intelligence: CISA KEV and Operation Soft Cell | MITRE ATT&CK

- Analysed CVEs from the CISA Known Exploited Vulnerabilities (KEV) catalog and the Operation Soft Cell APT campaign against telecom networks.
- Mapped attacker techniques across 11 MITRE ATT&CK tactics and wrote detection and mitigation recommendations.

Threat Intelligence Report | IBM X-Force Exchange

- Investigated 3 malware-linked domains, 10 spam and botnet IPs, 3 critical CVEs (CVSS 9.1+) and 3 threat groups.

Privacy Policy Generator | GDPR, CCPA, PIPEDA

- Built a tool that generates privacy policies covering GDPR, CCPA and PIPEDA, with export to PDF, Word and HTML.

SKILLS

SOC and Detection: SIEM (Sumo Logic), Windows Event Log analysis, alert triage, brute-force detection, threat intelligence, IOC analysis, MITRE ATT&CK, Cyber Kill Chain

Identity and Access: Okta, Active Directory (AD DS), MFA, user and group lifecycle, access policies

Cloud and Systems: AWS (EC2), Windows Server, Linux, TCP/IP

Tools and Languages: Python, IBM X-Force Exchange, Burp Suite

Compliance: GDPR, CCPA, PIPEDA, DPDP Act 2023

CERTIFICATIONS AND RESEARCH

- AWS Certified Cloud Practitioner, Amazon Web Services (valid until Apr 2028)
- TryHackMe: Jr Penetration Tester path, 50+ rooms completed, top 15% in India
- Research paper on privacy risks in generative AI submitted to ICTCon 2026 (Springer CCIS); under review
