

Okta Identity and Access Management

Hands-On Lab Report

Prepared by: Yuva

Environment: Okta Integrator Free Plan

Date: August 2026

About This Report

I put this together to show the work I did learning Okta. If you haven't used it before, Okta is basically what companies use to handle logins, user accounts, and security across all their apps. I went through five assignments, one after another, and each one taught me something different about identity and access management (or IAM, if you want the short version).

Below, assignment by assignment, I've written out what I actually did and dropped in the screenshots as proof. Nothing fancy, just what happened, in the order it happened.

Assignment 1: Okta Account Login

Goal: log in to Okta and get a feel for the Admin Console.

What I did

1. Signed up for a free Okta account (the Integrator Free Plan).
2. Logged into the Admin Console with my email and password.
3. Found the Dashboard first. It's basically the home page, gives you a quick summary of what's going on in your account.
4. Next, the Users menu, which Okta calls "Directory → People." That's where every user account shows up.
5. And the Applications menu, where you'd add and manage apps like Slack or Google Workspace.

Screenshot 1.1 — Dashboard

The screenshot shows the Okta Admin Console Dashboard. The left sidebar contains the 'Admin Console' menu with options like Dashboard, Home, Tasks, Integration Agents, Notifications, Directory, Customizations, Applications, and Identity Governance. The main content area is divided into several sections: Overview, Status, Tasks, Org changes, and Security Monitoring. The Overview section shows 'Users' (No users added), 'Groups' (No groups added), and 'SSO Apps' (No apps added). The Status section shows 'Okta service' as OPERATIONAL and 'Integration Agents' as 'No integration agents added'. The Tasks section shows a single task: 'Assign the super admin role to another user'. The Org changes section shows three policy rule updates. The Security Monitoring section shows a progress bar for 10 of 18 tasks completed, with a 'View HealthInsight' link.

Overview Updated at Aug 8, 2026, 5:30:00 PM

- Users** 0 No users added [Import users](#)
- Groups** 0 No groups added [Import groups](#)
- SSO Apps** 0 No apps added [Add an app](#)

Status

- Okta service** OPERATIONAL
- Integration Agents** No integration agents added

Screenshot 1.2 — Users (People) Page

The screenshot shows the Okta Admin Console Users (People) page. The left sidebar contains the 'Admin Console' menu with options like Dashboard, Directory, People, Groups, AI Agents, MCP Servers, Resource Servers, Devices, Profile Editor, and Directory Integrations. The main content area is titled 'People' and includes a search bar, a status filter, and a table of users. The table shows one user: Yuvaraj Prudhvi, with primary email yuvarajprudhvi.works@protonmail.com and status Active.

Person & username	Primary email	Status
Yuvaraj Prudhvi yuvarajprudhvi.works@protonmail.com	yuvarajprudhvi.works@protonmail.com	Active

Screenshot 1.3 — Applications Page

What I learned: Honestly, this was mostly about getting my bearings. Now I know where everything lives: Dashboard for the overview, Users for people, Applications for apps. Feels obvious now, but I needed this first before touching anything else.

Assignment 2: User & Group Management

Goal: create a couple of users, drop them in a group, and actually test that login works.

What I did

1. Created a user called Student1 with a temporary password, set so it forces a change on first login.
2. Did the same thing for Student2.
3. Made a new group called IT-Students.
4. Put both Student1 and Student2 into that group.
5. Opened a private browser window and signed in as Student1 with the temp password.
6. Okta made me set a new password before letting me through. Did that, and it worked fine.

Screenshot 2.1 — Users List (Student1 and Student2 created)

The screenshot shows the Okta Admin Console interface. The left sidebar contains the 'Admin Console' menu with options: Dashboard, Directory, People (selected), Groups, AI Agents, MCP Servers, Resource Servers, Devices, Profile Editor, and Directory Integrations. The main content area is titled 'People' and includes a search bar, 'Add person', 'Reset passwords', and 'More actions' buttons. Below these is a table of users:

Person & username	Primary email	Status
Student2 test student2-test.uncrushed921@passinbox.com	student2-test.uncrushed921@passinbox.com	Password expired
Student1 Test student1-test.rickety645@passinbox.com	student1-test.rickety645@passinbox.com	Password expired
Yuvaraj Prudhvi		Active

At the bottom left, a box indicates 'INTEGRATOR FREE PLAN' with '3 of 10 Active users' and a 'Contact us' button.

Screenshot 2.2 — Group Created (IT-Students)

The screenshot shows the Okta Admin Console interface with the 'Groups' page selected. The left sidebar is the same as in Screenshot 2.1, but 'Groups' is highlighted. The main content area is titled 'Groups' and includes a search bar, 'Add group' button, and 'All'/'Rules' tabs. Below these is a table of groups:

Group name	People	Applications
IT-Students Group for IT student test accounts	0	0
Everyone All users in your organization	3	0
Okta Administrators Okta manages this group, which contains all administrators in your organization.		

At the bottom left, a box indicates 'INTEGRATOR FREE PLAN' with '3 of 10 Active users' and a 'Contact us' button.

Screenshot 2.3 — Both Users Added to the Group

The screenshot displays the Okta Admin Console interface. On the left, the 'Admin Console' sidebar is visible with the 'Groups' section highlighted. The main content area shows the 'IT-Students' group, which is described as 'Group for IT student test accounts'. It was created on 8/8/2026 and last modified on 8/8/2026. Below this, there are tabs for 'People', 'Applications', 'Profile', 'Directories', and 'Admin roles'. The 'People' tab is selected, showing a search bar and a table of users. The table lists two users: 'Student2 test' (student2-test.uncrushed921@passinbox.com) and 'Student1 Test' (student1-test.rickety645@passinbox.com), both with a status of 'Password expired'. A 'Contact us' button is visible in the bottom left corner of the sidebar.

Contact us

Screenshot 2.4 — Password Reset Screen

The screenshot shows a web browser window with the URL `integrator-8277869.okta.com/oauth2/v1/authorize?client_id=okta-2b1959c8-bcc0-56eb-a589-cfcb7422f26&code_cha...`. The page displays the Okta logo at the top, followed by a lock icon and the text: "Your protonmail-integrator-8277869 password has expired". Below this, the email address `student1-test.rickety645@passinbox.com` is shown. The "Password requirements:" section lists the following criteria:

- At least 8 characters
- A lowercase letter
- An uppercase letter
- A number
- No parts of your username
- Password can't be the same as your last 4 passwords

Below the requirements are two input fields: "New password" and "Re-enter password", each with a toggle icon for password visibility. At the bottom is a blue "Change Password" button.

Screenshot 2.5 — Successful Login

The screenshot shows the Okta "My Apps Dashboard" for the user "Student1 Test" (`student1-test.rickety645@passinbox.com`). The left sidebar contains navigation links: "Dashboard", "My Apps" (selected), "Work", "Notifications", and "Add apps". The main content area has a search bar and a "My Apps" section with a rocket icon and the text: "Add apps to your launcher. Please contact your admin for assistance." Below this is a "Support" section with the email `yuvarajprudhvi.works@protonmail.com` and a "Request an app" button. The right sidebar shows the user's profile, account settings, recent activity, display preferences, and sign out options. At the bottom right, there is a promotional banner for "Okta Personal" with a "Find out more" button and a "Sign in" link. The footer includes the text: "Last sign in: a few seconds ago", "© 2026 Okta, Inc.", and "Privacy".

What I learned: This is basically how a company sets up a new hire on day one: create the account, stick them in the right group, hand over a temp password, make them change it. Simple once you've done it, but I can see why getting this wrong causes headaches for IT teams.

Assignment 3: Application Integration

Goal: hook up an app to Okta and figure out how people actually get access to it.

What I did

1. Went into the App Catalog and added a ready-made app, Slack in my case.
2. Opened up the app's Assignments tab.
3. Gave Student1 direct access to it.
4. Then assigned it to the whole IT-Students group too, so Student2 picks it up automatically.
5. Logged in as a student and checked the app tile actually showed up on their dashboard.

Screenshot 3.1 — App Added to Okta

Screenshot 3.2 — App Assigned to One User

The screenshot shows the Okta Admin Console interface. On the left is the 'Admin Console' sidebar with navigation links: Dashboard, Directory, Customizations, Applications, Self Service, API Service Integrations, Your OIN Integrations, Identity Governance, and Security. The 'Applications' section is expanded, showing 'Integrator Free Plan' with '3 of 10 Active users' and a 'Contact us' button. The main content area displays the 'Slack' application configuration. The 'Assignments' tab is selected, showing a table with one user assigned: 'Student1 Test' (email: student1-test.rickety645@passinbox.com). The table has columns for 'Person' and 'Type' (Individual). On the right, there are 'REPORTS' (Current Assignments, Recent Unassignments) and 'SELF SERVICE' (Requests: Disabled, Approval: N/A) sections.

Screenshot 3.3 — App Assigned to a Group

The screenshot shows the Okta Admin Console interface, similar to Screenshot 3.2. The 'Assignments' tab for the 'Slack' application is selected. The table now shows one group assigned: 'IT-Students' (Group for IT student test accounts). The table has columns for 'Priority' (1) and 'Assignment'. On the right, the 'REPORTS' and 'SELF SERVICE' sections are visible, identical to the previous screenshot.

Screenshot 3.4 — App Visible on Student Dashboard

What I learned: What stood out here: you can give access one person at a time, or just assign a whole group and let it cascade. Once you've got 50 or 500 employees, that group option is clearly the only sane way to do it.

Assignment 4: Okta Agent Installation

Goal: understand how Okta talks to a company's own local systems, like Active Directory.

What I did

This one needed a Windows Server that's actually part of a domain (basically a network of computers managed as one unit). I used a Windows Server VM I already had running on AWS for other learning stuff.

1. Installed the Active Directory Domain Services (AD DS) role on the VM. This is what lets a server manage accounts for a whole network.
2. Promoted the server to a Domain Controller, which created a new domain called lab.local. Think of the Domain Controller as the brain of the whole AD setup.
3. Server restarted, and I logged back in as the domain administrator.
4. Grabbed the Okta AD Agent installer from the Admin Console.

5. Ran it. First attempt failed, the server wasn't part of a domain yet. Set that up, ran it again, and it went through fine.
6. It asked which Windows account the agent should run under. I let it create one called OktaService.
7. Got an activation code from the installer, went to the Okta activation page, and typed it in to link everything together.
8. My first code expired before I got to it (they don't wait long), so I grabbed a fresh one and entered it fast. That one worked.
9. Checked Directory Integrations back in the Admin Console. Agent showed Active. Done.

Screenshot 4.1 — Okta AD Agent Installer (Download Agent Step)

Screenshot 4.2 — AD DS Installed Successfully

Screenshot 4.3 — Domain Controller Setup (Prerequisites Check Passed)

Screenshot 4.4 — Agent Activated Successfully (Browser Confirmation)

Screenshot 4.5 — Agent Status: Active in Okta Admin Console

What I learned: This was the hardest one, honestly, and also the most interesting. An Okta Agent is really just a small program sitting inside a company's own network, quietly bridging it to Okta without exposing anything directly to the internet. It only works once the server is properly set up as part of a domain, and I hit real errors along the way, an existing account conflict, an expired activation code, that I had to actually debug instead of just following steps blindly.

Assignment 5: Basic Security Policy & MFA

Goal: add a second layer of login security with MFA.

What I did

1. Checked Security → Authenticators and confirmed Okta Verify and Password were both switched on and ready to use.
2. Went to Security → Authentication Policies and created a new rule.
3. Set it up so a user needs a password AND a second factor (Okta Verify, in this case) to log in. That's the whole idea of MFA: one proof isn't enough anymore.
4. Opened a private browser window and logged in as Student1 to see if the rule actually kicked in.
5. It did. Okta stopped Student1 and asked for a security method before letting them through.
6. Finished the verification, and the login went through.

Screenshot 5.1 — Authenticators Enabled

The screenshot shows the Okta Admin Console interface. The left sidebar contains the 'Admin Console' menu with options like Identity Governance, Security, General, HealthInsight, and Authenticators (which is currently selected). The main content area is titled 'Authenticators' and includes tabs for 'Setup', 'Enrollment', and 'Okta Verify release controls'. A table lists the configured authenticators:

Name	Factor type	Characteristics	Status
Email	Possession		Active
Okta Verify	Possession Possession + Knowledge ¹ Possession + Biometric ¹	Device bound Hardware protected Phishing resistant (Okta FastPass) ²	Active
Password	Knowledge		Active

Footnote: ¹ Multiple factor requirements may be satisfied based on the device used to enroll

Screenshot 5.2 — MFA Challenge Screen During Login

The screenshot shows the Okta MFA challenge screen. At the top is the Okta logo. Below it, the text "Verify it's you with a security method" is displayed. Underneath, the email address "student1-test.rickety645@passinbox.com" is shown with a user icon. The instruction "Select from the following options" is centered. There are two options: "Enter a code Okta Verify" with a circular icon containing a checkmark and a "Select" button, and "Password" with a circular icon containing a lock and "****" and a "Select" button. At the bottom left is a link "Back to sign in".

okta

Verify it's you with a security method

student1-test.rickety645@passinbox.com

Select from the following options

 **Enter a code**
Okta Verify [Select](#)

 **Password** [Select](#)

[Back to sign in](#)

What I learned: This one made MFA click for me in a way just reading about it never did. Even if a password gets stolen, that's only half the puzzle now, someone still needs the second factor to actually get in. Small thing to set up, but it's doing a lot of the heavy lifting in real-world security.
