Available now | Open to relocating to the UAE, employment visa required

PROFILE

Computer science graduate with a cybersecurity specialisation, out in May 2026. I deploy the tooling a SOC runs on, test whether it detects what it is supposed to, and write up the result so somebody else can act on it. Four hands-on write-ups completed in 2026 covering SIEM deployment, identity and access management, threat intelligence and APT campaign analysis. AWS Certified Cloud Practitioner. Ranked in the top 15% on TryHackMe in India.

EDUCATION

B.Tech Computer Science and Engineering (Cybersecurity) SRM University AP, Amaravati. Graduated May 2026. Coursework in network security, cyber forensics and vulnerability analysis.

CERTIFICATION

AWS Certified Cloud Practitioner Amazon Web Services, valid to April 2028. Validation 4b1b3731aa2541f0aedaf0fbecc09284, verify at aws.amazon.com/verification.

TRAINING AND LEARNING PATHS

Jr Penetration Tester TryHackMe learning path, completed 21 February 2025. Certificate THM-6XSREAX8KU.

Networking fundamentals Cisco Networking Academy, course completion.

Onboarding track Sumo Logic Academy. Data collection, search queries and dashboards.

PROJECTS AND WRITE-UPS (2026)

Sumo Logic SIEM deployment. Installed a cloud SIEM collector on a Windows Server VM running on AWS EC2, attached a Windows Event Log source across the Security, Application and System channels, and confirmed 149 events searchable. Simulated repeated failed RDP logons and verified detection as EventCode 4625, ten audit failures, alongside 4624, 4634 and 4672.

Okta IAM lab. Took an empty tenant through five assignments: user and group creation with forced password reset at first login, application assignment by group, AD DS installation and domain controller promotion on Windows Server, Okta AD Agent activation against the new domain, and an MFA authentication policy verified end to end. Debugged three install failures including a service account conflict and an expired activation code.

IBM X-Force threat intelligence. Investigated three malware-linked domains, ten spam and botnet IP addresses, three critical CVEs scoring 9.1 and above, and three named threat groups, mapping observed techniques to MITRE ATT&CK.

Operation Soft Cell analysis. Analysis of a four-wave state-sponsored intrusion into telecom operators, mapped across the ATT&CK matrix from initial access through to exfiltration, with detection and database-level recommendations for defenders.

SELF-DIRECTED LABS

TryHackMe, 2022 to present. 50+ rooms completed, ranked in the top 15% in India. SOC Tier 1 incident triage, log review, root-cause analysis and systematic fault isolation under timed conditions. Profile at tryhackme.com/p/iamalsouser.

RESEARCH

Privacy risks in generative and agentic AI. Literature review across 90 sources evaluating five major AI platforms against MITRE ATT&CK and the Cyber Kill Chain, identifying six regulatory gaps across GDPR, CCPA and the DPDP Act 2023, and proposing a three-tier user self-protection framework. Submitted to ICTCon 2026, IIT Goa and NFSU, Springer CCIS. Under review.

TECHNICAL SKILLS

Security. Threat intelligence, OSINT, log analysis, threat detection, incident response workflows

Tools. Sumo Logic, Okta, Nmap, Burp Suite, Metasploit, Wazuh, Splunk (self-study), MITRE ATT&CK, Cyber Kill Chain

Systems. Windows Server, Active Directory, Linux, operating system and hardware fundamentals

Cloud. AWS, EC2, access control, system reliability

Networking. TCP/IP, network traffic analysis, infrastructure support, system monitoring, troubleshooting

Compliance. GDPR, CCPA, PIPEDA, DPDP Act 2023, privacy by design
